CSE0001 – Digital Literacy

Report File

Name: Ashutosh Soni

Registration number:25BCE10815

Branch: Computer Science and Engineering Core

Year: 1st Year

Task 1: Create a Digital Literacy Awareness Infographic

Report:

For Task 1, I had used Canva to design the infographic. Since guys,Canva provided a wide range of templates and icons that made it easy to create a visually appealing and professional one-page resource.

What the Design Shows

The infographic covers three key topics:

1. What Digital Literacy Is – It's simple which is defined as the ability to use digital tools effectively, responsibly, and safely.
2. Safe Internet Practices – You can highlight password security, avoiding phishing, and responsible sharing for your safe internet practices.
3. Professional Online Presence –Your professional online presence is important which emphasizes

LinkedIn profiles, email etiquette, and maintaining a positive digital footprint.

The design uses icons, color-coded sections, and concise text to make the information easy to understand at a glance.

Reflection

One interesting aspect was balancing text and visuals. Ummm it was challenging to condense complex ideas into short, impactful phrases while keeping the design uncluttered. However, this process helped me appreciate how visual communication can make learning more engaging and accessible. This is all for task 1.

Result of task1 is below shown:)

WHAT IS DIGITAL LITERACY?

- Digital Literacy means finding, evaluating, and communicating information using digital technology.

SAFE INTERNET PRACTICES

- Use strong passwords, adjust privacy settings, and beware of unknown links.

USEFUL DIGITAL TOOLS FOR STUDENTS

- Try note-taking apps, citation generators, and collaboration platforms.

Task 2 :Build Your Student Digital Portfolio

Report:

For my digital portfolio, I had choose GitHub, LinkedIn, and Kaggle. Since we know that each platform serves a unique purpose in my academic and professional journey. GitHub is the central hub for my coding projects, where I can share repositories, collaborate with peers and project mates, and document my progress as a full stack developer. LinkedIn allows me to build a professional network, highlight my education, and connect with potential employers and internship coordinators. Kaggle provides opportunities to practice data analysis, participate in competitions, and learn from real-world datasets, which strengthens my problem-solving skills. Over the next four years, I plan to use GitHub to showcase projects and open-source contributions, LinkedIn to expand my professional connections and track career milestones, and Kaggle to continuously improve my analytical and machine learning abilities. As a result , together these platforms form

a strong foundation for my digital presence and demonstrate my commitment to growth in both software development and data science.

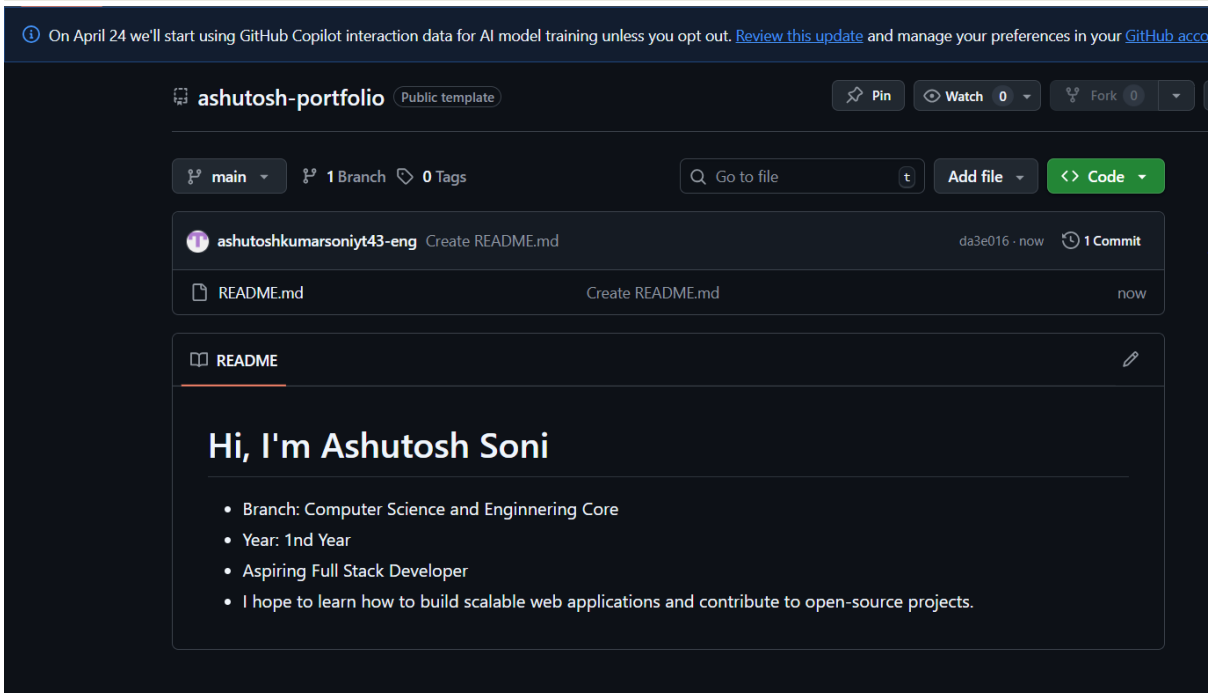
Bachelor's degree, Computer Science

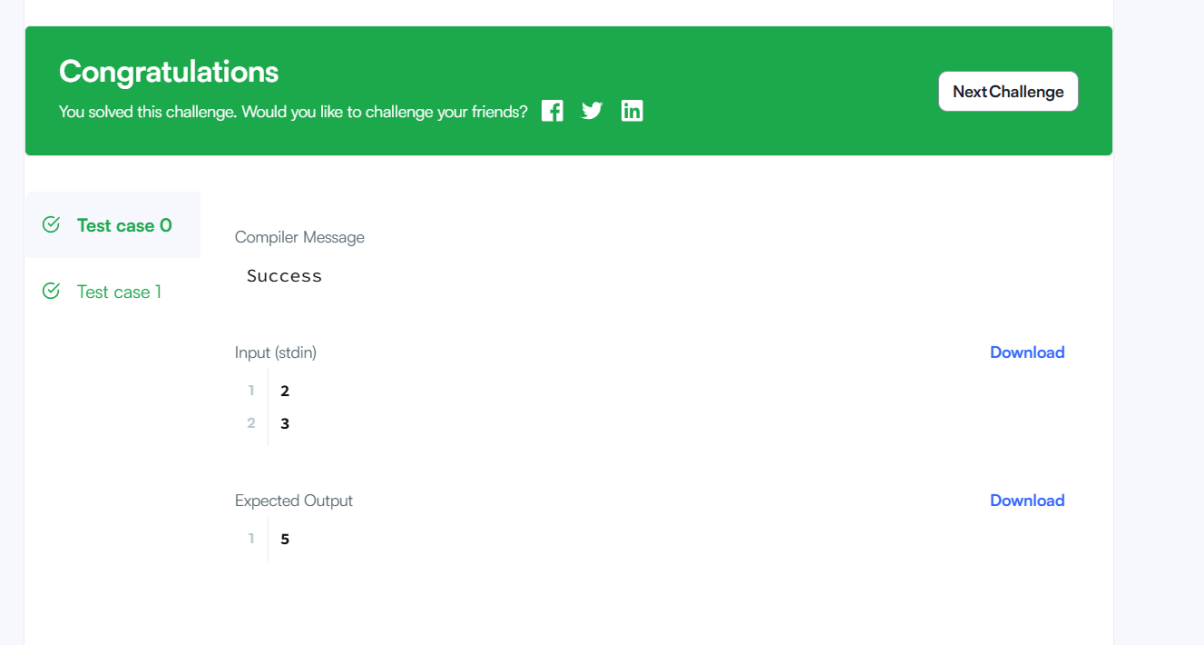
2025 - 2029



Task 3 Explore Coding & Collaboration Platforms

Part A: Coding Practice (choose one):

I registered hackerrank and complete the challenge of HackerRank's 'Solve Me First' .



Part B: Google Workspace Collaboration (mandatory):

For this task, I had explored two platforms: HackerRank for coding practice and Google Forms for collaboration. On HackerRank, I created an account and attempted the beginner challenge “Solve Me First.” This exercise helped me so much to

understand the basics of problem-solving in Python, including how to structure input and output. Completing the challenge gave me confidence in applying programming logic and introduced me to the platform's interactive environment, which is useful for continuous skill development.

For the collaboration part, I designed a Google Form titled "Digital Literacy Awareness Quiz." The form contained five questions, including multiple choice and short answer formats as told in question , covering topics such as password security, cloud storage benefits, and responsible social media use. I linked the form to a Google Sheet to automatically collect responses, which demonstrated how cloud tools streamline data management and teamwork.

Overall, these platforms will enhance my academic growth by combining technical practice with collaborative learning. Coding sites strengthen logical thinking and programming skills, while Google Workspace tools encourage peer interaction and efficient information sharing. Together, I guess they prepare students for both individual problem-solving and group projects in a digital environment. That's all for task 3..

Task 4 Draft a Professional Email & Etiquette Guide

Part A:Word file are attached to task-4-email-etiquette folder.

Part B: Create a Social Media Do's and Don'ts checklist:

Poor digital communication can cause serious misunderstandings. Less take a hypothetical scenario, a student once posted a negative comment about a professor on social media without realizing it was visible to the entire class. This will lead to disciplinary action and damage the student's academic reputation. The situation could have been avoided if the student had followed basic etiquette rules, such as keeping criticism private and communicating concerns directly through professional channels like email. Responsible digital communication ensures respect, clarity, and professionalism, which are essential for maintaining trust and credibility in both academic and

professional environments. This is all about for task 4.

Task 5 Cybercrime Awareness Case Study & Prevention Guide

Part A: Case Study:

I took Phishing Cybercrime and wrote the case study in different pdf and saved in task-5-cybercrime FOLDER.

Part B: Prevention Checklist:

Report:

While researching phishing attacks, I was most surprised by how convincing fraudulent emails and websites can look. Many victims fall prey not because they are careless, but because the scams are designed to most trusted institutions with alarming accuracy. I realized that even small details, such as a slightly altered domain name, can make the difference between safety and compromise.

One habit I will personally change is clicking on links without verifying them. I often open emails quickly, but now I will pause to check the sender's address and hover over links before visiting. This small step

can prevent major risks. Researching this topic has made me more cautious and has reinforced the importance of digital literacy in protecting myself and my peers from cybercrime. That's all for task 5.

----------Thank you that's all for Project file------
